- [Angie Davis](#) why didn't they file damages with the state of Colorado before the EPA accident? Pre Event conditions were toxic as well.

NEW DATA: Our sampling and analysis of the Animas and San Juan Rivers has found that, within New Mexico, the water quality in both of these rivers is trending towards pre-event conditions. Our monitoring will continue. See the full results here:

EPA Statement on Data from New Mexico to Navajo Nation from Gold King Mine Release

Farmington, New Mexico - August 13, 2015: Today, EPA has released additional water quality data from Aug. 7 to Aug. 8, 2015 for the Animas and San Juan Rivers from the Northern Border of New Mexico to Navajo Nation. Based upon the surface water sample results in New Mexico surface water concentratio...

Our data shows that water quality in the Animas River has returned to pre-event conditions, from Silverton to Durango. We're analyzing the water for 24 different metals, including arsenic, cadmium, lead and mercury. The chart below shows the declined presence of five of these metals at Bakers Bridge, north of Durango. See our most recent charts and data for Colorado here: <http://www2.epa.gov/.../epa-statement-colorado-data-gold-king...>
